

Floor Standing Heater Guard Installation Instructions

The fixings supplied are suitable for plaster board walls

Tools required

- Pencil
- Drill
- Philips (Crosshead) Screwdriver

Installing the heater guard

- Place the guard over the heater ensuring there is an even clearance between the guard and heater on all sides.
- Using a pencil mark off the screw hole positions on the wall for the guard.
- Place the guard aside then drill and plug the wall holes where you have marked.
- Insert screws into the wall plugs leaving a 10mm gap from the wall to the screw head.
- Using the keyhole fixing lugs, hook the electric heater guard onto the screws and tighten.
